(54) Title: METHOD AND ARRANGEMENT FOR CALIBRATING AN ARRANGEMENT FOR DRIVING IMAGE-REPRODUCING MEANS SUBJECT TO INERTIA

(57) Abstract: In a method and arrangement for correcting an arrangement for driving imagereproducing means subject to inertia, and particularly liquid crystal displays, wherein a stored correcting variable is added to infed video signals to compensate for the effects of inertia, which correcting variable depends on changes in the video signals from frame to frame, and wherein the corrected video signals are conveyed to the image-reproducing means, provision is made for a test pattern that contains signal jumps that occur from frame to frame to be generated, for the signal jumps to vary in respect of their sign, their size and their position in the amplitude range of the video signals, for the test video signals to be shown on the imagereproducing means at least in a part that is covered by at least one opto-electrical sensor, and for correcting parameters to be derived from the signals generated by the at least one optoelectrical sensor while taking account of the totality of the signals generated by the at least one opto-electrical sensor.
